

AWS Enterprise Transformation Playbook

Quickstart

Generated: February 12, 2026

AWS Enterprise Transformation Playbook - Quick Start Guide

Last Updated: 2026-02-12 Version: 1.0

What You Get

This playbook provides a complete enterprise transformation framework for AWS migrations, including:

- 52 production-ready artifacts (business case, governance, compliance, training, etc.)
 - Automated financial analysis (ROI, NPV, payback period calculations)
 - PDF generation for all documentation
 - 6-phase transformation methodology (Initiation → Optimization)
 - Compliance frameworks (SOC 2, HIPAA, PCI-DSS, General Enterprise)
 - Change management templates and training curricula
-

Installation (5 minutes)

Prerequisites

- Python 3.8 or higher
- Git (optional, for version control)

Step 1: Install Python Dependencies

```
cd enterprise-architecture/transformation/aws-enterprise-playbook
pip install -r requirements.txt
```

What this installs: - reportlab - PDF generation - markdown - Markdown processing - beautifulsoup4 - HTML parsing - pandas, numpy - Data analysis - matplotlib, plotly - Visualizations - And more...

Step 2: Verify Installation

```
python automation/scripts/business_case_calculator.py --help
```

```
python automation/scripts/markdown_to_pdf.py --help
```

If you see help text, you're ready to go!

Quick Wins (First 15 Minutes)

1. Calculate Your Business Case

Get immediate ROI, NPV, and payback period calculations:

```
python automation/scripts/business_case_calculator.py \  
--current-cost 500000 \  
--aws-cost 350000 \  
--implementation-cost 200000 \  
--years 5 \  
--output my-business-case.json
```

Example Output:

```
Return on Investment (ROI): 28.2%  
Net Present Value (NPV): $368,618  
Payback Period: 16.0 months  
Recommendation: STRONGLY RECOMMENDED
```

2. Generate Executive-Ready PDFs

Convert your documentation to professional PDFs:

```
# Single file  
python automation/scripts/markdown_to_pdf.py \  
--input README.md \  
--output playbook-overview.pdf
```

```
# All files in directory
python automation/scripts/markdown_to_pdf.py \
--directory . \
--output-dir pdf-outputs
```

Generated PDFs include: - Professional formatting with headers/footers - Page numbers and timestamps - Tables, code blocks, and styled headings - Automatic cover pages

3. Review the Business Case Template

Open and customize the business case template:

```
# View in editor
code business-case/business-case-template.md
# Or convert to PDF
python automation/scripts/markdown_to_pdf.py \
--input business-case/business-case-template.md \
--output business-case.pdf
```

Understanding the Playbook Structure

```
aws-enterprise-playbook/
■■■ README.md # Master playbook guide (START HERE)
■■■ ARTIFACTS-CATALOG.md # Catalog of all 52 artifacts
■■■ GENERATE-PDFS.md # PDF generation guide
■■■ QUICKSTART.md # This file
■■■ requirements.txt # Python dependencies
■
■■■ business-case/ # Business case artifacts
■ ■■■ business-case-template.md # Executive business case
■
■■■ governance/ # Governance frameworks
■ ■■■ compliance/ # SOC 2, HIPAA, PCI-DSS checklists
■ ■■■ policies/ # Cloud, data, security policies
■
■■■ change-management/ # Change management
```

```

■ ■■■ training-curriculum/ # Training materials
■
■■■ assessment/ # Assessment templates
■ ■■■ readiness-assessment.md # Readiness questionnaire
■
■■■ planning/ # Planning templates
■ ■■■ transformation-roadmap.md # Multi-year roadmap
■
■■■ playbooks/ # Phase-based playbooks
■ ■■■ 01-initiation-playbook.md # Phase 1: Initiation
■ ■■■ 02-assessment-playbook.md # Phase 2: Assessment
■ ■■■ 03-planning-playbook.md # Phase 3: Planning
■ ■■■ 04-execution-playbook.md # Phase 4: Execution
■ ■■■ 05-stabilization-playbook.md # Phase 5: Stabilization
■ ■■■ 06-optimization-playbook.md # Phase 6: Optimization
■
■■■ automation/ # Automation scripts
■■■ scripts/
■ ■■■ business_case_calculator.py # Financial calculator
■ ■■■ markdown_to_pdf.py # PDF generator
■■■ configs/ # Configuration files

```

Common Use Cases

For Executives

Goal: Get board approval for AWS transformation

```

# 1. Calculate business case
python automation/scripts/business_case_calculator.py \
--current-cost 1000000 \
--aws-cost 650000 \
--implementation-cost 500000 \
--output board-presentation-data.json

```

```
# 2. Generate executive PDFs
python automation/scripts/markdown_to_pdf.py \
--input business-case/business-case-template.md \
--output executive-business-case.pdf
# 3. Present to board
# Use the PDF and JSON data for your presentation
```

For Program Managers

Goal: Plan and execute transformation

```
# 1. Review all playbooks
ls playbooks/
# 2. Generate PDF playbook package
python automation/scripts/markdown_to_pdf.py \
--directory playbooks/ \
--output-dir playbook-pdfs/
# 3. Follow phase-by-phase
# Start with: playbooks/01-initiation-playbook.md
```

For Compliance Officers

Goal: Ensure regulatory compliance

```
# 1. Review compliance frameworks
ls governance/compliance/
# 2. Generate compliance documentation
python automation/scripts/markdown_to_pdf.py \
--directory governance/compliance/ \
--output-dir compliance-docs/
# 3. Use checklists for audits
# Each framework has a detailed checklist
```

For Technical Teams

Goal: Execute migration

```
# 1. Complete readiness assessment
# Review: assessment/readiness-assessment-questionnaire.md
# 2. Plan waves
# Use: planning/wave-planning.md
```

```
# 3. Execute migration
# Follow: playbooks/04-execution-playbook.md
```

6-Phase Transformation Journey

Phase 1: Initiation (Weeks 1-4)

- Secure executive sponsorship
- Establish governance
- Create business case
- Deliverable: Approved business case

Phase 2: Assessment (Weeks 5-12)

- Application inventory
- Readiness assessment
- Gap analysis
- Deliverable: Current state report

Phase 3: Planning (Weeks 13-20)

- Transformation roadmap
- Wave planning
- Resource allocation
- Deliverable: Detailed migration plan

Phase 4: Execution (Months 5-18)

- Wave-based migration
- Application modernization
- Testing and validation
- Deliverable: Migrated applications

Phase 5: Stabilization (Months 18-21)

- Hypercare support
- Performance tuning
- Knowledge transfer
- Deliverable: Stable production environment

Phase 6: Optimization (Months 21+)

- Cost optimization
 - Performance optimization
 - Continuous improvement
 - Deliverable: Optimized cloud operations
-

Success Metrics

Track these KPIs throughout your transformation:

Financial Metrics

- ROI: Target >25% within 24 months
- NPV: Positive net present value
- Payback Period: <24 months
- Cost Savings: Track against baseline

Operational Metrics

- Migration Velocity: Applications per wave
- Success Rate: >95% successful migrations
- Downtime: <5% of planned window
- Defect Rate: <5% post-migration

Adoption Metrics

- User Adoption: >80% within 6 months
- Training Completion: 100% of required staff
- Satisfaction: >85% stakeholder satisfaction

Compliance Metrics

- Compliance Score: 100% for required frameworks
 - Audit Findings: Zero critical findings
 - Security Posture: All controls implemented
-

Customization Guide

Priority 1: Customize First (Week 1)

1. Business Case Template - Update financial assumptions - Add organization-specific costs - Customize risk analysis
2. Governance Framework - Define decision-making structure - Assign roles and responsibilities - Set approval thresholds
3. Phase 1 Playbook - Adapt to organization structure - Set realistic timelines - Identify key stakeholders

Priority 2: Customize Soon (Weeks 2-4)

1. Compliance checklists for your industry
2. Training curricula for your teams
3. KPI definitions aligned to your goals
4. Communication plan for your culture

Priority 3: Customize Later (Ongoing)

1. Reporting templates
2. Meeting agendas
3. Artifact examples

Troubleshooting

PDF Generation Issues

Problem: Missing dependencies

```
# Solution  
pip install reportlab markdown beautifulsoup4 lxml
```

Problem: Unicode errors on Windows

```
# Solution: Already fixed in scripts  
# Use ASCII replacements instead of emojis
```

Business Case Calculator Issues

Problem: Unexpected results

```
# Solution: Verify inputs  
python automation/scripts/business_case_calculator.py \  
--current-cost 500000 \  
--aws-cost 350000 \  
--implementation-cost 200000 \  
--years 5 \  
--discount-rate 0.10
```

Problem: Need custom discount rate

```
# Solution: Use --discount-rate parameter  
--discount-rate 0.12 # For 12% discount rate
```

Next Steps

Immediate Actions (Today)

1. ■ Install dependencies: `pip install -r requirements.txt`
2. ■ Calculate your business case
3. ■ Generate PDF of README.md
4. ■ Review ARTIFACTS-CATALOG.md

This Week

1. Customize business case template with your numbers
2. Review Phase 1: Initiation playbook
3. Identify key stakeholders
4. Schedule kickoff meeting

This Month

1. Complete readiness assessment
2. Establish governance structure
3. Get business case approved
4. Begin Phase 1: Initiation

This Quarter

1. Complete Phase 1 and 2
2. Create detailed migration plan
3. Build transformation team
4. Begin Phase 3: Planning

Getting Help

Documentation

- Master Guide: README.md
- Artifacts Catalog: ARTIFACTS-CATALOG.md

- PDF Generation: GENERATE-PDFS.md

Support Resources

- AWS Documentation: <https://docs.aws.amazon.com/>

Recommended Reading Order

For your first time through the playbook:

1. START: This file (QUICKSTART.md)
 2. OVERVIEW: README.md - Master playbook guide
 3. CATALOG: ARTIFACTS-CATALOG.md - All artifacts
 4. BUSINESS CASE: business-case-template.md
 5. PHASE 1: playbooks/01-initiation-playbook.md
 6. ASSESSMENT: Run business case calculator
 7. CONTINUE: Follow playbooks in sequence
-

FAQ

Q: How long does a typical transformation take? A: 18-24 months for most enterprises, depending on portfolio size and complexity.

Q: What's the minimum team size? A: Start with 5-7 people: Program Manager, Cloud Architect, Migration Specialist, 2-3 Engineers.

Q: Can we do this without consultants? A: Yes! This playbook provides everything you need. Consider consultants for specialized skills or acceleration.

Q: Which compliance frameworks apply to us? A: Review governance/compliance/ directory. Common combinations: - Healthcare: HIPAA + General Enterprise - Financial: PCI-DSS + SOC 2 + General Enterprise - SaaS: SOC 2 + General Enterprise - All: General Enterprise (minimum baseline)

Q: How do we prioritize applications for migration? A: Use the wave planning template. Consider: - Business criticality (low first) - Technical complexity (simple first) - Dependencies (standalone first) - Quick wins (visible impact)

Q: What if our business case doesn't look good? A: Consider: - Non-financial benefits (agility, innovation, security) - Longer time horizon (7-10 years) - Strategic value (market competitiveness) - Cost of doing nothing (technical debt, security risks)

Version History

Version	Date	Changes
1.0	2026-02-12	Initial release

Ready to transform? Start with the business case calculator!

```
python automation/scripts/business_case_calculator.py \  
--current-cost YOUR_CURRENT_COST \  
--aws-cost YOUR_PROJECTED_AWS_COST \  
--implementation-cost YOUR_IMPLEMENTATION_COST \  
--years 5
```

Good luck with your transformation journey! ■
